- ETC...

YEARS OF EXPERIENCE ALLOWS US TO SUPPLY OUR CUSTOMERS WITH THE CORRECT VALVE MATERIALS THAT MEET THEIR SPECIFIC SERVICE CONDITIONS

LET **TOTAL VALVE & EQUIPMENT** PARTNER WITH YOU TO PROVIDE THE RIGHT VALVES FOR THE RIGHT APPLICATION

ACTUATION SETTING:

Our customers can rest well knowing their product is assembled right the first time. Proprietary tooling and procedures allow us to hold tight tolerances upon setting actuation.

Our maximum allowable tolerance is 2.5 degrees either side of 90 degrees closed.

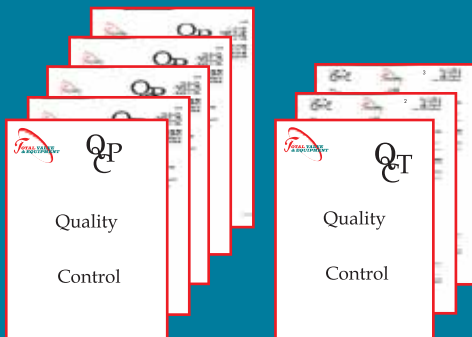

2.5 degrees allows for full ball seat engagement, while 5 degrees may cause some ball valves to be off of seat.

ACTUATION ACCESSORIES:

- All accessories are tubed and terminated according to customer's schematics and diagrams.
- All components are checked under power, in accordance with procedures and signed-off on.
- A supervisor checks work against job ticket and signs off after full inspection of working product. Product is then green tagged and moved to shipping.
- In shipping, all product goes through a final inspection against job ticket.
- Once product passes final inspection, it is ready to be shipped.
